Abstract of CN1346199

The computer telephone with PDA function belongs to the field of electronic product for communication. Said invention is formed from two portions of PDA and base, when said two portions are connected together, it can implement the functions of phone, paperless receiving/transmitting facsimile, E-mail and INTERNET browsing and auxiliary functions of prompting, scratch-pad and dictionary, etc. Its message interactive portion, i.e. PDA can be independently carried to implement personal on-palm computer function, so that the PDA can be taken off from communication base, the message being in PDA can be moved with user, and the communication base having no PDA not only can record data, but also can be used for calling, independently receiving facsimile and recording telephone message.
